

week 1 Project

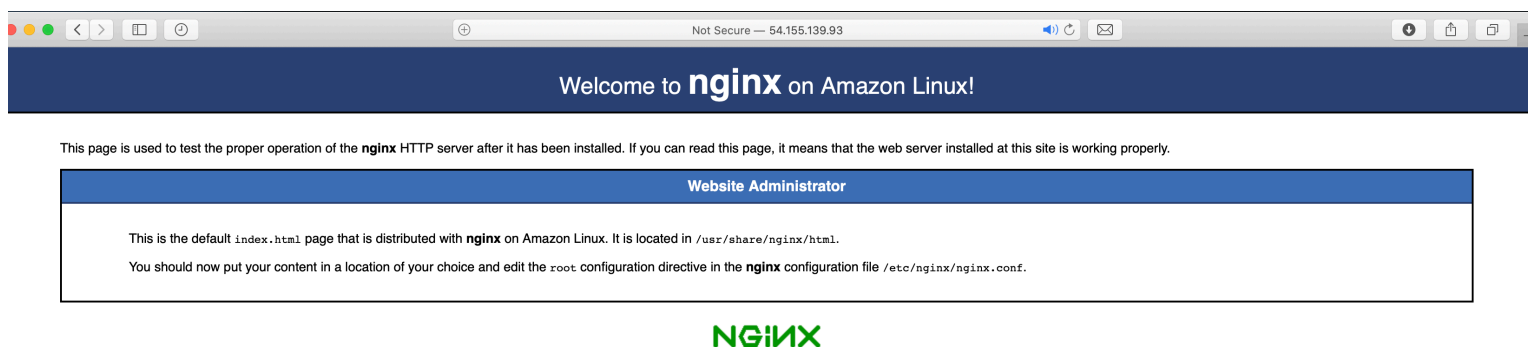

Setting Up A Web Server

Objective :

The objective is to replicate what we covered over the weekend. You will create a web server using **Terraform**. You can leverage the [repo](#) created in the class for the task.

By the time your project is completed, you should be able to access the web server using your computer browser , as it was demonstrated in the class. See the figure below:

Note:

- For those needing extra support, there is a mid-week (bonus class) on Tuesday at 10pm. It is not compulsory you attend . This is to do a recap on what we have discussed so far and to help those who need assistance to complete the project.
